 PS  
 CC This sequence represents the complementarity determining region-1 (CDR-1)  
 CC of the rWI2 light chain. This sequence is used in an antibody of the  
 CC invention. The antibody of the invention is a chimeric or humanised anti-  
 CC idiotypic antibodies (cab and hab, respectively) or a fragment which  
 CC specifically binds to the idiotype region of an anti-carcinoembryonic

CC antigen (CEA), where: (i) cab comprises the rWI2 light (L) and heavy (H)  
 CC chain variable regions, or silent mutations; and (ii) hab comprises rWI2  
 CC complementarity determining regions (CDR) and humanised framework (FR)  
 CC regions. The hab is used as a vaccine to stimulate an immune response in  
 CC a patient against cancers expressing CEA. The hab, can be used to clear  
 CC non-targeted antibody in a method of diagnosis or treatment of a patient  
 CC where a CEA antibody is used as a (pre-)targeting or therapy agent. The  
 CC cab is used to detect the presence of an antibody that specifically binds  
 CC to CEA in a sample

 PT (HCV) E1 or E2 antigen, useful for treating or preventing HCV infection.  
 XX Disclosure; Page 32; 64pp; English.  
 CC The invention relates to a human monoclonal antibody or its antigen  
 CC binding fragments, which exhibit immunological binding affinity for a  
 CC hepatitis C virus (HCV) E1 antigen, comprising an amino acid sequence  
 CC homologous to the binding portion of a human antibody Fab molecule from a  
 CC combinatorial antibody library. The vaccine composition comprising the  
 CC antibodies or antigen binding fragments against HCV E1 or E2 antigen or  
 CC its hypervariable region is useful in treating or preventing HCV  
 CC infection in a subject. Sequences ABG76513-ABG76568 represent human  
 CC monoclonal antibodies against HCV E1 antigen

 DR Antibodies against receptor for hyaluronic acid mediated motility, useful  
 PT for treating or preventing proliferative diseases, e.g. cancer or  
 PT cardiovascular disease.  
 XX Claim 23; Page 35; 39pp; English.  
 PS The present sequence is the amino acid sequence for the murine 16E10  
 CC light chain complementarily determining region 1. This forms part of the  
 CC monoclonal antibody 16E10, which can be used against the receptor for  
 CC hyaluronic acid mediated motility (RHAMM). RHAMM is required for ras-  
 CC transformation of cells, which leads to tumour formation, and so the  
 CC antibody can be used to treat proliferative disorders such as leukaemias,  
 CC solid tumour cancers and metastases including lymphomas, soft tissue,  
 CC brain, oesophageal, stomach, pancreatic, liver, lung, bladder, bone,  
 CC prostate, ovarian, cervical, uterine, skin, breast, testicular, kidney,  
 CC head and neck and colon cancers, chronic inflammatory diseases such as  
 CC psoriasis, inflammatory bowel disease and rheumatoid arthritis,  
 CC proliferative cardiovascular diseases such as restenosis, proliferative  
 CC ocular disorders such as diabetic retinopathy and benign  
 CC hyperproliferative diseases such as haemangiomas

 XX Altering a nucleic acid strand by extending or ligating an annealed  
 PT oligonucleotide of the subset to form an altered nucleic acid strand.  
 PT  
 XX Disclosure; SEQ ID NO 47; 180pp; English.  
 PS  
 XX The invention relates to a method of altering a nucleic acid (NA) strand  
 CC comprising: (i) providing template NA strand and diverse NA; (ii)  
 CC annealing a cleavage-directing oligonucleotide (ON) to each of the  
 CC diverse NA; (iii) cleaving each diverse NA to form diversity ON; (iv)  
 CC combining the diversity ON and the template NA strand; (v) annealing the  
 CC diversity ON to the template NA strand; and (vi) extending and/or  
 CC ligating an annealed ON to form an altered NA strand. The method is  
 CC useful for altering a nucleic acid strand. In an example of the  
 CC invention, the method is used to generate mutants and variations in the  
 CC amino acid sequence of the CDR's from human antibodies. This sequence  
 CC corresponds to one such mutant.

 XX New isolated antibody or its binding fragment that binds specifically to  
 PT a drug of abuse, useful for treating a patient suffering from addiction  
 PT to a drug of abuse, e.g. amphetamine, methamphetamine, or phencyclidine.  
 PT  
 XX Example 1; SEQ ID NO 102; 88pp; English.  
 PS  
 XX This invention relates to novel antibodies, or binding fragments thereof,  
 CC that bind directly to various drugs of abuse. Specifically, it refers to  
 CC human or chimeric monoclonal antibodies that are capable of binding to  
 CC amphetamine, methamphetamine or phencyclidine (PCP). The present  
 CC invention describes generating hybridoma cell lines that produce such  
 CC antibodies and transforming a cell with a gene encoding the antibody,  
 CC which when conjugated to a therapeutic agent, toxin or radioisotope can

CC be used to treat a patient suffering from a drug addiction. Accordingly,  
CC these compositions exhibit antiaddictive activities and can be used for  
CC antibody therapy to treat patients suffering from a drug addiction. This  
CC peptide sequence is the CDR1 peptide of a murine light chain variable  
CC anti-amphetamine antibody of the invention.

XX PT New recombinant antibody derived from murine antibody 14F7, useful for  
XX PT treatment and detection of malignant tumors, is specific for the  
XX PT ganglioside N-glycolyl-GM3, has reduced immunogenicity.

XX PS Claim 12; Page 25; 54pp; Spanish.

CC The invention relates to a recombinant antibody (rAb), derived from the  
CC murine monoclonal antibody 14F7 (produced by hybridoma ECACC 98101901),  
CC in which the complementarity determining regions (CDR) have the following  
CC sequences: heavy chain: CDR1, Ser-Tyr-Trp-Ile-His; CDR2, Tyr-Ile-Asp-Pro-  
CC Ala-Thr-Ala-Tyr-Thr-Glu-Ser-Asn-Gln-Lys-Phe-Lys-Asp; CDR3, Glu-Ser-Pro-  
CC Arg-Leu-Arg-Arg-Gly-Ile(Tyr) 3 Ala-Met-Asp-Tyr; light chain: CDR1, Arg-  
CC Ala-Ser-Gln-Ser-Ile-Ser-Asn-Asn-Leu-His; CDR2, Tyr-Ala-Ser-Gln-Ser-Ile-  
CC Ser; CDR3, Gln-Gln-Ser-Asn-Arg-Trp-Pro-Leu-Thr. The rAb and its  
CC derivatives recognize specifically the ganglioside N-glycolyl-GM3, so  
CC inhibit angiogenesis. The rAb, and derived single-chain Fv fragments, are  
CC used, when labelled with a radioisotope, for treatment of malignant  
CC tumors (especially of the breast, or melanomas), including metastases and  
CC relapses; also when appropriately labelled, they are useful for in vivo  
CC localization and detection of tumors. The rAb and its derivatives are  
CC less immunogenic in humans than 14F7 itself. This sequence corresponds to  
CC the mutated complementarity determining region 1 derived from the mouse  
CC antibody 14F7 and used to generate the antibody of the invention.

XX PT New pregnancy-associated plasma protein-A (PAPP-A) binding proteins  
XX PT comprising immunoglobulin variable domain sequences, useful for  
XX PT diagnosing, preventing or treating diseases such as cancer.

XX PS Example; SEQ ID NO 152; 168pp; English.

CC The present invention relates to novel proteins (I) that bind to  
CC pregnancy-associated plasma protein A (PAPP-A ADM04676). (I) comprises a  
CC first and second immunoglobulin variable domain sequence which binds to  
CC PAPP-A. Also claimed are proteins (II) which comprise light chain (LC)  
CC and heavy chain immunoglobulin variable domain sequences which binds to  
CC PAPP-A. The proteins are useful for diagnosing, preventing or treating  
CC proliferative diseases such as glioblastoma, osteosarcoma and overgrowth  
CC of vascular smooth muscle cells following e.g., balloon angioplasty  
CC (which may cause restenosis). The proteins are especially useful for  
CC useful for treating diseases involving IGF regulated growth. The present  
CC sequence is one such immunoglobulin variable domain sequence.

XX agents that bind to IL-1 receptor, by detecting binding of IL-lalpa/IL-  
XX lbeta to IL-1R1 in presence of test agent and selecting agent that  
XX decreases IL-1 activity.  
XX  
XX Example 2; Fig 6A; 55pp; English.  
XX  
XX The invention relates to methods of screening for antibodies or other  
XX agents which selectively bind to the pro-inflammatory cytokine  
XX interleukin-1 (IL-1) to form an antagonist complex which can still bind  
XX to IL-1 receptor type I (IL-1R1) but which cannot activate it. The agents  
XX identified using the methods act by blocking the recruitment of the IL-1  
XX receptor accessory protein (IL-1RACp) by the IL-1/IL-1R1 complex,  
XX preventing IL-1 signaling and thereby reducing inflammatory responses.  
XX One screening method of the invention involves detecting the binding of  
XX IL-lalpa or IL-lbata to IL-1R1 in the presence of a test agent,  
XX detecting IL-1R1 activity in cells comprising IL-1R1 and IL-lalpa or IL-  
XX lbeta, and selecting the test agent which allows IL-lalpa or IL-lbata to  
XX bind to IL-1R1 but which decreases IL-1 activity. A second method  
XX involves detecting the binding of IL-1RACp to IL-1R1 in the presence of  
XX IL-lalpa or IL-lbata and a test agent, and selecting the test agent  
XX whose presence correlates with decreased binding to IL-1RACp to IL-1R1.  
XX The methods are useful for screening for antibodies and other selective  
XX IL-1 binding agents which can be used in the treatment of a variety of  
XX acute and chronic IL-1-mediated diseases (including rheumatoid arthritis,  
XX Alzheimer's disease, acute pancreatitis, diabetes, graft-versus-host  
XX disease, osteoporosis, Parkinson's disease, psoriasis, septic shock, and  
XX uveitis), or an inflammatory condition resulting from trauma, cartilage  
XX damage, surgery or infection. An example of the invention describes the  
XX construction of DNA encoding the kappa light chain variable region (VL)  
XX of a humanized (CDR-grafted) version of the murine anti-IL-lbata  
XX monoclonal antibody, MAB201, which is capable of blocking the formation  
XX of the IL-lbata/IL-1 receptor/IL-1RACp complex. The constructed DNA  
XX encodes a VL (ADZ47745) comprising the Kabat-defined CDRs  
XX (complementarity-determining regions) of the murine MAB201 VL (ADZ47655,  
XX ADZ47742), framework regions derived from the human germline kappa light

XX Recombinant anti-CD22 antibodies and immuno-conjugates - of antibodies  
 PT linked to a therapeutic agent, e.g. Pseudomonas exotoxin or a label; for  
 PT inhibiting malignant B-cells.

XX Claim 6; Fig 1; 71pp; English.

XX The invention claims for a recombinant immunoconjugate comprising of a  
 CC therapeutic agent (e.g Pseudomonas exotoxin) or a detectable label  
 CC peptide bonded to a recombinant anti-CD22 antibody (RFB4 IgG) having a  
 CC variable heavy (VH; AAW66099) chain with a cysteine residue at amino acid  
 CC 44 and the present variable light (VL) chain with a cysteine residue at  
 CC amino acid 100. The immunoconjugate is claimed to inhibit the growth of  
 CC malignant B-cells in vivo, such as rodent, canine or primate B-cells. The  
 CC anti-CD22 antibody is claimed useful for detecting CD22 protein in a  
 CC sample or in vivo in a mammal, and can be used in diagnostic kits

XX DR Remodeling a peptide, by removing a saccharyl subunit from the peptide to  
PT form truncated glycan, and adding or deleting glycosyl groups to a  
PT peptide and/or adding modifying group of a peptide to remodel the  
PT peptide.  
XX PS Example; Fig 76; 900pp; English.  
XX CC The invention relates to a cell-free, in vitro method of remodeling a  
CC peptide. The method involves removing a saccharyl subunit from the  
CC peptide, thus forming a truncated glycan, and contacting the truncated  
CC glycan with at least one glycosyltransferase and at least one glycosyl  
CC donor under conditions suitable to transfer at least one glycosyl donor  
CC to the truncated glycan, thus remodeling the peptide. Conjugates can be  
CC formed between a granulocyte colony stimulating factor (G-CSF) peptide,  
CC interferon alpha peptide, interferon beta peptide, Factor VIIa peptide,  
CC Factor IX peptide, follicle stimulating hormone peptide, erythropoietin  
CC (EPO) peptide, granulocyte macrophage colony stimulating factor (GM-CSF)  
CC peptide, interferon-gamma peptide, alpha-1-protease inhibitor (A-1-PI)  
CC peptide, beta-glucosidase peptide, tissue plasminogen activator (TPA)  
CC peptide, interleukin-2 (IL-2) peptide, Factor VIII peptide, TNFalpha  
CC receptor/immunoglobulin (Ig) G fusion peptide, urokinase peptide, anti-  
CC glycoprotein Iib/Iiia monoclonal antibody peptide, chimeric anti HBR2  
CC antibody peptide, anti-respiratory syncytial virus (RSV) F peptide, anti-  
CC CD20 antibody peptide, recombinant DNase peptide, anti-TNP alpha peptide,  
CC insulin peptide, hepatitis B surface antigen (HbsAg), human growth  
CC hormone (HGH) peptide, and a modifying group, where the modifying group  
CC is covalently attached to the peptide through an intact glycosyl linking  
CC group. The method is useful for a cell-free, in vitro method of  
CC remodeling the above mentioned peptides. The present sequence represents  
CC an anti-glycoprotein Iib/Iiia monoclonal antibody mature light chain  
CC variable region

 DR New re-engineered or framework-patched immunoglobulin, useful for  
 PT preparing a composition for treating cancer, preferably Non-Hodgkin's  
 PT lymphoma or rheumatoid arthritis.  
 XX  
 PS Example 1; Fig 1b; 66pp; English.  
 CC The invention relates to a novel re-engineered or framework (FR)-patched  
 CC immunoglobulin, containing the heavy and/or light chain variable region  
 CC (VH/VL) sequences from a parent antibody. Within these chains, at least  
 CC one of the compartmentalised framework sequences, defined as FR1, FR2,  
 CC FR3 and FR4 are replaced, or patched, by the corresponding framework  
 CC sequences from the heavy and light chain immunoglobulin region of a  
 CC different species. The FR-patched immunoglobulin binds specifically to an  
 CC antigen with affinity comparable to, or within 3-fold of, that of the  
 CC parent immunoglobulin. The invention discloses the process of FR-patching  
 CC which is used to generate re-engineered immunoglobulin chains having one  
 CC or more complementarity determining regions (CDR's) from a donor  
 CC immunoglobulin and portions of framework sequences from one or more human  
 CC or primate immunoglobulins. The molecules obtained demonstrate cytostatic  
 CC activity as well as reduced or eliminated immunogenicity, whilst  
 CC maintaining the specificity and affinity of the parent antibody. The FR-  
 CC patched immunoglobulin is useful during the preparation of a composition  
 CC for treating cancer, preferably Non-Hodgkin's lymphoma and also during  
 CC the treatment of rheumatoid arthritis. Furthermore, the molecules of the  
 CC invention may also prove useful in gene therapy. The current sequence is  
 CC that of the murine anti-CD22 antibody, RFB4, VL protein of the invention

XX Treating interleukin-1 mediated disease, by administering an IL-1  
 PT selective binding agent that binds to IL-1alpha or IL-1beta, such that  
 PT the complex binds to IL-1 receptor without activating the receptor.

XX Example 2; Page 19; 39pp; English.

XX The invention relates to treating interleukin-1 (IL-1)-mediated disease,  
 CC or blocking IL-1alpha and IL-1beta from binding to the IL-1 receptor,  
 CC involving administering an IL-1 selective binding agent (e.g. a humanised  
 CC mouse anti-IL-1 antibody) that is capable of binding to IL-1 alpha or IL-  
 CC 1beta, where the selective binding agent-IL-1 complex is capable of  
 CC binding to IL-1 receptor without activating the receptor. The activities  
 CC of mouse, chimaeric and humanised monoclonal antibody (MAB)201 in  
 CC blocking formation of IL-1beta/IL-1 receptor/IL-1RacP complex were  
 CC studied. The results showed that anti-IL-1beta antibody MAB201 is the  
 CC most effective inhibitor of IL-1beta signalling. The method is useful for  
 CC treating IL-1-mediated disease e.g. acute pancreatitis, amyotrophic  
 CC lateral sclerosis (ALS), Alzheimer's disease, cachexia, anorexia, asthma,  
 CC pulmonary diseases, atherosclerosis, autoimmune vasculitis, chronic  
 CC fatigue syndrome, Clostridium associated illness, coronary conditions  
 CC (e.g. congestive heart failure, coronary restenosis, myocardial  
 CC infarction, myocardial dysfunction and coronary artery bypass graft),

CC cancers, diabetes, endometriosis, fever, fibromyalgia, hyperalgesia,  
 CC glomerulonephritis, graft versus host disease; haemorrhagic shock,  
 CC inflammatory bowel disease, inflammatory conditions (e.g. osteoarthritis,  
 CC psoriatic arthritis and rheumatoid arthritis), inflammatory eye disease,  
 CC ischaemia including cerebral ischaemia, stroke, Kawasaki's disease,  
 CC learning impairment, lung diseases (adult respiratory distress syndrome  
 CC (ARDS)), multiple sclerosis, myopathies, neurotoxicity, osteoporosis,  
 CC pain, Parkinson's disease, periodontal disease, preterm labour,  
 CC psoriasis, reperfusion injury, septic shock, side effects from radiation  
 CC therapy, temporal mandibular joint disease, sleep disturbance, uveitis  
 CC and inflammatory conditions resulting from strain, sprain, cartilage  
 CC damage, trauma, orthopaedic surgery and infection. The present sequence  
 CC is a heavy, light or kappa chain of the mouse anti-IL-1 monoclonal  
 CC antibody MAB201 which was humanised or made into a chimaeric molecule  
 CC with human CDR (complementarity determining region) sequences

New heavy or light chain variable useful for specificity grafting, or for
generating humanized antibody which in turn is useful for treating
lymphocytic leukemia.
XX
PS      Disclosure; SEQ ID NO 17; 74pp; English.
XX
XX
The present sequence is the protein sequence of the light chain variable
region (VL) of murine anti-human CD22 antibody RFB4. A claimed humanised
antibody comprises a VL region and a heavy chain variable region (VH) in
which the complementarity determining regions (CDRs) are from a donor
antibody and in which the VH and VL regions are selected from a set of
human frameworks ADH50824-ADH50838. The donor CDRs are preferably from
RFB4, and RFB4 humanised scFv antibodies have been constructed. Claimed
immunconjugates comprise a humanised antibody linked to a detectable or
therapeutic (especially cytotoxic) moiety. The invention also provides a
new method of identifying framework acceptor regions in framework
sequences for back-mutation to graft a donor sequence to the human
framework.

XX
This invention relates to novel erythropoietin (EPO) peptides and the
remodelling and glycoconjugation of these naturally occurring peptides
thereof. Specifically, each EPO peptide comprises one or more glycans and
has a glycoconjugate molecule such as polyethylene glycol (PEG) attached
to it. Accordingly, the present invention provides glycoPEGylated EPO
peptides that have either monoantennary, biantennary or triantennary
glycans covalently attached thereto. As such, these peptides are useful
for the treatment of anaemia, and hence exhibit antianaemic activities
working to increase haematocrit levels in mammals, in particular in
humans i.e. increasing the relative volume of blood occupied by
erythrocytes. Furthermore, EPO therapy can be used to treat kidney
dialysis patients. This polypeptide is a human protein sequence related
to the field of haematology, given in an exemplification of the
invention.

 XX New low molecular weight antibody recognizing CD22, useful for inducing  
 PT apoptosis in tumor cells.  
 PT  
 PS Claim 3; SEQ ID NO 11; 77pp; Japanese.  
 XX  
 CC This invention relates to a novel low molecular weight antibody that  
 CC recognises CD22. Specifically, it refers to preparing an anti-CD22  
 CC antibody (or diabody) in which variable regions of the heavy chain and  
 CC the light chain are bonded together via a 5mer linker to produce a  
 CC molecule that exhibits increased activity due to the reduced molecular  
 CC weight. The present invention further describes apoptosis inducing agents  
 CC and anti-tumour agents that each comprise this antibody as the active  
 CC ingredient with apoptosis inducing activity. In particular, the diabody  
 CC (defined as a recombinant antibody comprising two linked single chain  
 CC antibodies) and can be useful in the treatment of chronic myeloid  
 CC leukaemia, Crohn's disease and multiple sclerosis. Furthermore, it can be  
 CC produced at a lower cost than conventional antibodies and exhibits a high  
 CC specific activity with respect to tumour cells including lymphoma or  
 CC leukaemia cells, in reduced dosage amounts. As such, the diabody can be  
 CC used to prepare apoptosis-inducing agents and anti-tumour agents (e.g.  
 CC for blood tumours) and hence these compositions exhibit cytostatic,  
 CC antiinflammatory and neuroprotective activities. This polypeptide  
 CC sequence is a single chain antibody protein of the CD22 diabody RPB4  
 CC given in an exemplification of the invention.

 CC methods of detecting and/or identifying an agent that binds to an HMGB  
 CC polypeptide, methods of treating a condition in a subject characterized  
 CC by activation of an inflammatory cytokine cascade, and methods of  
 CC detecting an HMGB polypeptide in a sample. The antibody (or antigen-  
 CC binding fragment) binds to a vertebrate HMGB A box but does not  
 CC specifically bind to non-A box epitopes of HMGB, and inhibits release of  
 CC a proinflammatory cytokine from a vertebrate cell treated with an HMGB  
 CC protein. A method of treating a condition characterized by activation of  
 CC an inflammatory cytokine cascade comprises administering an antibody of  
 CC the invention, or its antigen-binding fragment. The condition is selected  
 CC from sepsis, allograft rejection, arthritis, asthma, lupus, adult  
 CC respiratory distress syndrome, chronic obstructive pulmonary disease,  
 CC psoriasis, pancreatitis, peritonitis, burns, ischemia, Behcet's disease,  
 CC graft versus host disease, inflammatory bowel disease, multiple sclerosis  
 CC and cachexia, especially sepsis, arthritis, or lupus. The present  
 CC sequence is the protein sequence of the light chain variable region  
 CC (Vkappa) of an anti-HMGB1 monoclonal antibody produced by claimed murine  
 CC hybridoma 10D4 HMGB1 (ATCC PTA-5435).

 XX Amplifying nucleic acid encoding portion of antibody, by annealing primer  
 PT to template encoding antibody, synthesizing polynucleotide complementary  
 PT to template, annealing template to polynucleotide and amplifying  
 PT polynucleotide.  
 XX Disclosure; SEQ ID NO 145; 76pp; English.  
 XX The invention describes a method of amplifying a nucleic acid encoding a  
 CC portion of an antibody, involving annealing a primer to a template that  
 CC encodes a portion of the antibody, synthesizing a polynucleotide that  
 CC complementary to the portion of the template, separating the synthesized  
 CC polynucleotide, annealing a template oligonucleotide to the synthesized  
 CC polynucleotide, extending the synthesized polynucleotide and amplifying  
 CC the polynucleotide. Also described are: producing (M2) an antibody  
 CC library, involves providing a diverse population of templates that encode  
 CC a portion of an IGA antibody, contacting the diverse population of  
 CC templates with a primer, which has a first portion which anneals to the  
 CC templates and a second portion of predetermined sequence which does not  
 CC anneal to the templates, and carrying out steps (b)-(f) of (M1); a  
 CC library of IGA antibodies prepared by (M2); identifying (M3) an antibody  
 CC having a desired binding specificity, involves preparing a library of IGA  
 CC antibodies by (M2), and screening the library to identify one or more IGA  
 CC antibodies having a desired binding specificity; and an IGA antibody  
 CC identified by (M3). (M1) is useful for amplifying nucleic acid encoding a  
 CC portion of an antibody, and for producing an antibody library. (M2) is  
 CC useful for identifying an antibody having a desired binding specificity.  
 CC (M1) enables an improved nucleic acid amplification with decreased mis-  
 CC priming and amplification of sequences other than the target sequence.  
 CC This is the amino acid sequence of an IGG kappa light chain variable  
 CC region comprising framework 1-CDRI-framework 2-CDR2.

Treating interleukin-1 mediated disease, by administering an IL-1  
 selective binding agent that binds to IL-1alpha or IL-1beta, such that  
 the complex binds to IL-1 receptor without activating the receptor.

Example 2; Fig 6A; 39pp; English.

The invention relates to treating interleukin-1 (IL-1)-mediated disease,  
 or blocking IL-1alpha and IL-1beta from binding to the IL-1 receptor,  
 involving administering an IL-1 selective binding agent (e.g. a humanised  
 mouse anti-IL-1 antibody) that is capable of binding to IL-1 alpha or IL-  
 1beta, where the selective binding agent-IL-1 complex is capable of  
 binding to IL-1 receptor without activating the receptor. The activities  
 of mouse, chimaeric and humanised monoclonal antibody (MAB)201 in  
 blocking formation of IL-1beta/IL-1 receptor/IL-1Racp complex were  
 studied. The results showed that anti-IL-1beta antibody MAB201 is the  
 most effective inhibitor of IL-1beta signalling. The method is useful for  
 treating IL-1-mediated disease e.g. acute pancreatitis, amyotrophic  
 lateral sclerosis (ALS), Alzheimer's disease, cachexia, anorexia, asthma,  
 pulmonary diseases, atherosclerosis, autoimmune vasculitis, chronic  
 fatigue syndrome, Clostridium associated illness, coronary conditions  
 (e.g. congestive heart failure, coronary restenosis, myocardial  
 infarction, myocardial dysfunction and coronary artery bypass graft),  
 cancers, diabetes, endometriosis, fever, fibromyalgia, hyperalgesia,  
 glomerulonephritis, graft versus host disease, haemorrhagic shock,  
 inflammatory arthritis and rheumatoid arthritis), inflammatory eye disease,  
 ischaemia including cerebral ischaemia, stroke, Kawasaki's disease,  
 learning impairment, lung diseases (adult respiratory distress syndrome  
 (ARDS)), multiple sclerosis, myopathies, neurotoxicity, osteoporosis,  
 pain, Parkinson's disease, periodontal disease, preterm labour,  
 psoriasis, reperfusion injury, septic shock, side effects from radiation  
 therapy, temporal mandibular joint disease, sleep disturbance, uveitis  
 and inflammatory conditions resulting from strain, sprain, cartilage  
 damage, trauma, orthopaedic surgery and infection. The present sequence  
 is a human germline variable region used to determine which residues or  
 CDRs required to be changed in mouse anti-IL-1 monoclonal antibody MAB201  
 in order to humanise it or make it into a chimaeric molecule with human  
 CDR (complementarity determining region) sequences

 XX  
 XX Treating interleukin-1 mediated disease, by administering an IL-1  
 PT selective binding agent that binds to IL-1alpha or IL-1beta, such that  
 PT the complex binds to IL-1 receptor without activating the receptor.  
 PT  
 XX  
 XX Example 2; Fig 6A; 39pp; English.  
 PS  
 XX  
 XX The invention relates to treating interleukin-1 (IL-1)-mediated disease,  
 CC or blocking IL-1alpha and IL-1beta from binding to the IL-1 receptor,  
 CC involving administering an IL-1 selective binding agent (e.g. a humanised  
 CC mouse anti-IL-1 antibody) that is capable of binding to IL-1 alpha or IL-  
 CC 1beta, where the selective binding agent-IL-1 complex is capable of  
 CC binding to IL-1 receptor without activating the receptor. The activities  
 CC of mouse, chimaeric and humanised monoclonal antibody (MAB)201 in  
 CC blocking formation of IL-1beta/IL-1 receptor/IL-1Racp complex were  
 CC studied. The results showed that anti-IL-1beta antibody MAB201 is the  
 CC most effective inhibitor of IL-1beta signalling. The method is useful for  
 CC treating IL-1-mediated disease e.g. acute pancreatitis, amyotrophic  
 CC lateral sclerosis (ALS), Alzheimer's disease, cachexia, anorexia, asthma,

CC pulmonary diseases, atherosclerosis, autoimmune vasculitis, chronic  
 CC fatigue syndrome, Clostridium associated illness, coronary conditions  
 CC (e.g. congestive heart failure, coronary restenosis, myocardial  
 CC infarction, myocardial dysfunction and coronary artery bypass graft),  
 CC cancers, diabetes, endometriosis, fever, fibromyalgia, hyperalgesia,  
 CC glomerulonephritis, graft versus host disease; haemorrhagic shock,  
 CC inflammatory bowel disease, inflammatory conditions (e.g. osteoarthritis,  
 CC psoriatic arthritis and rheumatoid arthritis), inflammatory eye disease,  
 CC ischaemia including cerebral ischaemia, stroke, Kawasaki's disease,  
 CC learning impairment, lung diseases (adult respiratory distress syndrome  
 CC (ARDS)), multiple sclerosis, myopathies, neurotoxicity, osteoporosis,  
 CC pain, Parkinson's disease, periodontal disease, preterm labour,  
 CC psoriasis, reperfusion injury, septic shock, side effects from radiation  
 CC therapy, temporal mandibular joint disease, sleep disturbance, uveitis  
 CC and inflammatory conditions resulting from strain, sprain, cartilage  
 CC damage, trauma, orthopaedic surgery and infection. The present sequence  
 CC is a human germline variable region used to determine which residues or  
 CC CDRs required to be changed in mouse anti-IL-1 monoclonal antibody MAB201  
 CC in order to humanise it or make it into a chimaeric molecule with human  
 CC CDR (complementarity determining region) sequences

XX New heavy or light chain variable useful for specificity grafting, or for  
PT generating humanized antibody which in turn is useful for treating  
PT lymphocytic leukemia.  
XX Disclosure; SEQ ID NO 19; 74pp; English.  
XX The present sequence is the protein sequence of a human light chain  
CC variable region (VL) framework, denoted VL#19 ADH50825, with grafted  
CC complementarity determining regions (CDRs) from mouse anti-human CD22  
CC antibody RFB4 VH ADH50840, and with additional human framework residues  
CC back-mutated to the mouse donor residue. Claimed humanised antibodies  
CC comprise human variable chain framework regions with CDRs from a donor  
CC antibody, especially RFB4. RFB4 humanised scFv antibodies have been  
CC constructed. Claimed immunoconjugates comprise a humanised antibody  
CC linked to a detectable or therapeutic (especially cytotoxic) moiety. The  
CC invention also provides a new method of identifying framework acceptor  
CC regions in framework sequences for back-mutation to graft a donor  
CC sequence to the human framework.

XX Screening antibodies and other selective interleukin-1 IL-1 binding  
PT agents that bind to IL-1 receptor, by detecting binding of IL-1alpha/IL-  
PT beta to IL-1R1 in presence of test agent and selecting agent that  
FT decreases IL-1 activity.  
XX  
XX Example 2; Fig 6A; 55pp; English.  
XX The invention relates to methods of screening for antibodies or other  
CC agents which selectively bind to the pro-inflammatory cytokine  
CC interleukin-1 (IL-1) to form an antagonist complex which can still bind  
CC to IL-1 receptor type I (IL-1R1) but which cannot activate it. The agents  
CC identified using the methods act by blocking the recruitment of the IL-1  
CC receptor accessory protein (IL-1RACp) by the IL-1/IL-1R1 complex,  
CC preventing IL-1 signaling and thereby reducing inflammatory responses.  
CC One screening method of the invention involves detecting the binding of  
CC IL-1alpha or IL-1beta to IL-1R1 in the presence of a test agent,  
CC detecting IL-1R1 activity in cells comprising IL-1R1 and IL-1alpha or IL-  
CC beta, and selecting the test agent which allows IL-1alpha or IL-1beta to  
CC bind to IL-1R1 but which decreases IL-1 activity. A second method  
CC involves detecting the binding of IL-1RACp to IL-1R1 in the presence of  
CC IL-1alpha or IL-1beta and a test agent, and selecting the test agent  
CC whose presence correlates with decreased binding to IL-1RACp to IL-1R1.  
CC The methods are useful for screening for antibodies and other selective  
CC IL-1 binding agents which can be used in the treatment of a variety of  
CC acute and chronic IL-1-mediated diseases (including rheumatoid arthritis,  
CC Alzheimer's disease, acute pancreatitis, diabetes, graft-versus-host  
CC disease, osteoporosis, Parkinson's disease, psoriasis, septic shock, and  
CC uveitis), or an inflammatory condition resulting from trauma, cartilage  
CC damage, surgery or infection. The present sequence represents the light  
CC chain variable region (VL) of the murine anti-IL-1beta monoclonal  
CC antibody MAB201, which is capable of blocking the formation of the IL-  
CC beta/IL-1 receptor/IL-1RACp complex. The MAB201 VL and heavy chain  
CC variable region (VH) were used as the basis for the construction of  
CC mouse/human chimeric and CDR-grafted (humanized) versions of the MAB201  
CC antibody in an example of the invention. Note: The present sequence  
CC differs from SEQ ID NO:4 of the sequence listing (ADZ47655) which is also  
CC referred to as a murine monoclonal antibody MAB201 light chain variable  
CC region.

 A:Reference number: A01927; MUID:82150934; PMID:6801658  
 A:Accession: A01927

A:Molecule type: protein  
 A:Residues: 1-108 <SIB>

A:Cross-references: UNIPROT:P01644; UNIPARC:UPI000002A0C5  
 A:Experimental source: strain A/J

A>Note: hp 93G7 differs in having 93-Met; HP 12386 differs in having 7-Ser, 92-Tyr, and  
 Arg, 84-Ser, and 93-Ala  
 C:Comment: The sequence shown is HP R16.7.

C:Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kaf  
 hain disulfide bonds. In some cases, such as IGA and IGM, the subunits associate into 1  
 C:Superfamily: immunoglobulin V region; immunoglobulin homology  
 C:Keywords: heterotetramer

[10]  
RP -1- FUNCTION: Cytokine that binds to TNFRSF11B/OPG and to  
CC TNFRSF11A/RANK. Osteoclast differentiation and activation factor.  
CC Augments the ability of dendritic cells to stimulate naive T-cell  
CC proliferation. May be an important regulator of interactions  
CC between T cells and dendritic cells and may play a role in the  
CC regulation of the T cell-dependent immune response. May also play  
CC an important role in enhanced bone-resorption in humoral  
CC hypercalcemia of malignancy.  
CC -1- SUBUNIT: Homotrimer.  
CC -1- SUBCELLULAR LOCATION: Type II membrane protein and secreted  
CC (isoforms 1 and 2); Cytoplasmic (isoform 3).  
CC -1- ALTERNATIVE PRODUCTS:  
CC Event=Alternative splicing; Named isoforms=3;  
CC Name=1;  
CC IsoId=O35235-1; Sequence=Displayed;  
CC Name=2;  
CC IsoId=O35235-2; Sequence=VSP\_006449;  
CC Name=3;  
CC IsoId=O35235-3; Sequence=VSP\_006448;  
CC -1- TISSUE SPECIFICITY: Highly expressed in thymus and lymph nodes,  
CC but not in nonlymphoid tissues and is abundantly expressed in T  
CC cells but not in B cells. A high level expression is also seen in  
CC the trabecular bone and lung.  
CC -1- PTM: N-glycosylated.

CC -1- PTM: The soluble form of isoform 1 derives from the membrane form  
CC by proteolytic processing. The cleavage may be catalyzed by  
CC ADAM17. A further shorter soluble form was observed.  
CC -1- DISEASE: Deficiency in Tnfrsf11 results in failure to form lobulo-  
CC alveolar mammary structures during pregnancy, resulting in death  
CC of newborns. France-deficient mice show severe osteopetrosis, with  
CC no osteoclasts, marrow spaces, or tooth eruption, and exhibit  
CC profound growth retardation at several skeletal sites, including  
CC the limbs, skull, and vertebrae and have marked chondrodysplasia,  
CC with thick, irregular growth plates and a relative increase in  
CC hypertrophic chondrocytes.  
CC -1- SIMILARITY: Belongs to the tumor necrosis factor family.  
CC

CC -!- FUNCTION: Cytokine that binds to TNFRSF11B/OPG and to

TNFRSF11A/RANK. Osteoclast differentiation and activation factor. Augments the ability of dendritic cells to stimulate naive T-cell proliferation. May be an important regulator of interactions between T cells and dendritic cells and may play a role in the regulation of the T cell-dependent immune response. May also play

an important role in enhanced bone-resorption in humoral

hypercalcemia of malignancy.

CC -!- SUBUNIT: Homotrimer (By similarity).

CC -!- SUBCELLULAR LOCATION: Type II membrane protein and secreted (By similarity).

CC -!- TISSUE SPECIFICITY: Highly expressed in thymus and bone tissues.

CC -!- PTM: The soluble form derives from the membrane form by

proteolytic processing (By similarity).

CC -!- SIMILARITY: Belongs to the tumor necrosis factor family.

 RT "Genes for phycocyanin subunits in Synechocystis sp. strain PCC 6701  
 RT and assembly mutant UV16.";

RL J. Bacteriol. 172:1289-1296(1990).  
 CC -!- FUNCTION: Light-harvesting photosynthetic bile pigment-protein  
 CC from the phycobiliprotein complex.  
 CC -!- SUBUNIT: Heterodimer of an alpha and a beta chain.  
 CC -!- PTM: Contains one covalently linked bilin chromophore.  
 CC -!- SIMILARITY: Belongs to the phycobiliprotein family.  
 CC This Swiss-Prot entry is copyrighted. It is produced through a collaboration  
 CC between the Swiss Institute of Bioinformatics and the EMBL outstation -  
 CC the European Bioinformatics Institute. There are no restrictions on its  
 CC use as long as its content is in no way modified and this statement is not  
 CC removed.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 PS  
 XX This sequence represents the complementarity determining region-2 (CDR-2)  
 CC of the rWI2 light chain. This sequence is used in an antibody of the  
 CC invention. The antibody of the invention is a chimeric or humanised anti-  
 CC idiotype antibodies (cAb and hAb, respectively) or a fragment which  
 CC specifically binds to the idiotype region of an anti-carcinoembryonic

CC antigen (CEA), where: (i) cAb comprises the rWI2 light (L) and heavy (H)  
 CC chain variable regions, or silent mutations; and (ii) hAb comprises rWI2  
 CC complementarity determining regions (CDR) and humanised framework (FR)  
 CC regions. The hAb is used as a vaccine to stimulate an immune response in  
 CC a patient against cancers expressing CEA. The hAb, can be used to clear  
 CC non-targeted antibody in a method of diagnosis or treatment of a patient  
 CC where a CEA antibody is used as a (pre-)targeting or therapy agent. The  
 CC cAb is used to detect the presence of an antibody that specifically binds  
 CC to CEA in a sample

XX antibodies - useful in detection of anti-CEA antibodies and as vaccine to
XX stimulate immune response against cancer.
XX
XX PS Claim 6; Fig 7; 46pp; English.
XX
XX This sequence represents the rat rW12 light chain. This sequence is used
XX in an antibody of the invention. The antibody of the invention is a
XX chimeric or humanised anti-idiotype antibodies (cAb and hAb,
XX respectively) or a fragment which specifically binds to the idiotype
XX region of an anti-carcinoembryonic antigen (CEA), where: (i) cAb
XX comprises the rW12 light (L) and heavy (H) chain variable regions, or
XX silent mutations; and (ii) hAb comprises rW12 complementarity determining
XX regions (CDR) and humanised framework (FR) regions. The hAb is used as a
XX vaccine to stimulate an immune response in a patient against cancers
XX expressing CEA. The hAb, can be used to clear non-targeted antibody in a
XX method of diagnosis or treatment of a patient where a CEA antibody is
XX used as a (pre-)targeting or therapy agent. The cAb is used to detect the
XX presence of an antibody that specifically binds to CEA in a sample

XX
XX Propionibacterium acnes polypeptides and nucleic acids useful for
XX vaccinating against and diagnosing infections, especially useful for
XX treating acne vulgaris.
XX
XX Example 1; SEQ ID NO 1924; 1069pp; English.
XX
XX Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic
XX polypeptides. The proteins and their associated DNA sequences are used in
XX the treatment, prevention and diagnosis of medical conditions caused by
XX P. acnes. The disorders include SAPHO syndrome (synovitis, acne,
XX pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.
XX P. acnes is also involved in infections of bone, joints and the central
XX nervous system, however it is particularly involved in the inflammatory
XX lesions associated with acne vulgaris. A method for detecting the
XX presence or absence of P. acnes in a patient comprises contacting a
XX sample with a binding agent that binds to the proteins of the invention
XX and determining the amount of bound protein in the sample. The
XX polypeptides may be used as antigens in the production of antibodies
XX specific for P. acnes proteins. These antibodies can be used to
XX downregulate expression and activity of P. acnes polypeptides and
XX therefore treat P. acnes infections. The antibodies may also be used as
XX diagnostic agents for determining P. acnes presence, for example, by
XX enzyme linked immunosorbent assay (ELISA). Note: The sequence data for
XX this patent did not form part of the printed specification, but was
XX obtained in electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences

XX
XX New Propionibacterium acnes polypeptides and polynucleotides encoding the
XX polypeptide, useful for diagnosing, preventing or treating acne vulgaris,
XX or for stimulating an immune response specific for a P. acnes protein.
XX
XX Example 1; SEQ ID NO 1924; 1481pp; English.
XX
XX The invention relates to an isolated polynucleotide (ACF64435-ACF64733)
XX encoding a Propionibacterium acnes protein. The invention also relates to
XX polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to
XX immunogenic fragments of P. acnes polypeptides. The invention
XX additionally encompasses expression vectors and host cells comprising a
XX polynucleotide of the invention; antibodies against polypeptides of the
XX invention; fusion proteins comprising a polypeptide of the invention; a
XX method for stimulating an immune response specific for a P. acnes
XX polypeptide and an isolated T cell population comprising T cells prepared
XX via this method; a vaccine composition (comprising P. acnes polypeptides,
XX polynucleotides, antibodies, fusion proteins, T cell populations, or
XX antigen-presenting cells that express the polypeptide); a method and kit
XX for detecting or determining the presence or absence of P. acnes in a
XX patient; and a method for inhibiting the development of P. acnes in a
XX patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion
XX proteins, T cell populations or antigen-presenting cells that express the
XX polypeptides are useful for diagnosing, preventing or treating acne
XX vulgaris, or for stimulating an immune response specific for a P. acnes
XX protein. The polynucleotides can also be used as probes or primers for
XX nucleic acid hybridisation. The vaccine composition is useful for the
XX stimulation of an immune response against P. acnes, or for treating acne,
XX and the kit is useful for performing a diagnostic assay. The present
XX sequence represents a polypeptide predicted to be encoded by an ORF (open
XX reading frame) contained within the P. acnes polynucleotides of the
XX invention. Note: The sequence data for this patent did not form part of
XX the printed specification, but was obtained in electronic format directly
XX from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT nucleic acids encoding perillipin, useful for treating a metabolic
PT disorder e.g. obesity, diabetes or atherosclerosis.
XX Example 13; SEQ ID NO 11; 167pp; English.
XX The present invention describes a compound 8-80 nucleobases in length
CC targeted to, and which specifically hybridises with a nucleic acid
CC molecule encoding perillipin, and inhibits the expression of perillipin.
CC Also described: (1) a compound 8-80 nucleobases in length that
CC specifically hybridises with at least an 8-nucleobase portion of an
CC active site on a nucleic acid molecule encoding perillipin; (2) a
CC composition comprising the compound and a carrier or diluent; (3) a
CC method for inhibiting the expression of perillipin in cells or tissues by
CC contacting the cells or tissues with the compound so that expression of
CC perillipin is inhibited; (4) a method of treating an animal having a
CC disease or condition associated with perillipin by administering to the
CC animal a therapeutic or prophylactic amount of the compound so that
CC expression of perillipin is inhibited; and (5) a method for screening an
CC antisense compound by contacting a preferred target region of a nucleic
CC acid molecule encoding perillipin with one or more candidate antisense
CC compounds comprising at least an 8-nucleobase portion that is
CC complementary to the preferred target region, and selecting for one or
CC more candidate antisense compounds that inhibit the expression of a
CC nucleic acid encoding perillipin. The antisense compounds have
CC antidiabetic, anorectic, antiarteriosclerotic and cardiant activities,
CC and can be used in perillipin inhibitors. The compounds, compositions and
CC methods of the present invention are useful for treating a disease or
CC condition associated with perillipin, such as a metabolic disorder, e.g.
CC diabetes, obesity or atherosclerosis. They are also useful in research
CC and diagnostics for modulating the expression of perillipin. The present
CC sequence represents mouse perillipin, which is used in an example from the
CC present invention.

 PS Claim 8; SEQ ID NO 15166; 2537pp + Sequence Listing; English.  
 XX  
 CC The present invention describes primer sets for synthesizing 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesizing polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent specialised human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification of the present invention.

 PR Paramyxovirus vectors encoding antibody applicable as gene therapeutic vectors for in vivo or ex vivo administration against nerve elongation inhibitor, useful in treating nerve injury.  
 PT  
 XX  
 PS Example 1; SEQ ID NO 11; 143pp; Japanese.  
 XX  
 CC The invention relates to a novel paramyxovirus vector encoding a polypeptide containing antibody variable regions. The vector of the invention demonstrates neuroprotective activity and may be applicable as a gene therapeutic vector for in vivo or ex vivo administration against a nerve elongation inhibitor and thus may be useful in treating nerve injury. The vector is capable of localised expression within the vicinity of the disease locus to reduce side-effects and to minimise the associated cost when developing monoclonal antibody drugs. Furthermore, the vector can express an antibody which inhibits immunopotentialisation signal transfer thereby enabling the prolonged expression of a gene from the vector and repeated administrations are possible. The current sequence is that of the Sendai virus paramyxovirus vector-related antibody IN-1 light chain protein of the invention.

XX
XX A novel immunogen molecule comprising a region in which amino acid
XX residues corresponding to at least a portion of the complementary
XX determining region are replaced or fused with an erythropoietin or
XX thrombopoietin mimetic.
XX
XX Example 4; Fig 13B; 113pp; English.
XX
XX The present invention describes an immunoglobulin molecule or its fragment
XX (I) comprising a region where amino acid residues corresponding to at
XX least a portion of the complementary determining region (CDR) are
XX replaced or fused with biologically active peptides e.g. a peptide
XX mimetic such as an erythropoietin (EPO) or thrombopoietin (TPO) mimetic,
XX that is flanked with proline at its carboxy terminus. (I) has
XX antianaemic, haemostatic and nephrotropic activities, and can be used as
XX a stimulator of proliferation, differentiation and maturation of
XX haematopoietic cells, and a stimulator of haematopoiesis. (I) is useful
XX for stimulating proliferation, differentiation or growth of
XX promegakaryocytes or megakaryocytes, where (I) is contacted with
XX promegakaryocytes or megakaryocytes, which results in increased platelet
XX production. (I) with a region where amino acid residues corresponding to
XX a portion of CDR is replaced with an EPO mimetic, or which has one or
XX more of its CDRs fused to an EPO mimetic, is useful for increasing the
XX production of red blood cells, where (I) is contacted with haematopoietic
XX stem cells or their progenitors. (I) is useful for diagnostics or
XX therapeutics, in cell isolation strategies, and for treating patients
XX suffering from deficiency in cell populations caused by disease,
XX disorders or treatments related to the suppression of haematopoiesis.

comprising a region where amino acid residues corresponding to at least a portion of a complementarity determining regions (CDR) is replaced with a peptide selected from human brain natriuretic protein (hBNP), hBNP mimetics, glycogen phosphorylase (GLP)-1, GLP-1 mimetics, GLP-2, GLP-2 mimetics, exendin, exendin mimetics, glucagons, glucagon mimetics and PACAP-38. Also included are a nucleic acid encoding the immunoglobulin molecule, an expression vector comprising the nucleic acid, a host cell transformed with the expression vector, producing an immunoglobulin molecule (or its fragment, comprising culturing the host cell under conditions suitable for expression of the immunoglobulin or its fragment), a composition comprising an immunoglobulin (or its fragment) and a pharmaceutically acceptable carrier, treating congestive heart failure (comprising administering to the subject an immunoglobulin molecule or fragment comprising a region where amino acid residues corresponding to at least a portion of a CDR is replaced with a peptide selected from hBNP and hBNP mimetics), treating diabetes or obesity (comprising administering to a subject an immunoglobulin molecule or its fragment comprising a region where amino acid residues corresponding to at least a portion of a CDR is replaced with GLP-1), inducing endothelial-dependent relaxation of precontracted pulmonary artery rings (comprising administering to a subject an immunoglobulin molecule or fragment thereof comprising a region where amino acid residues corresponding to at least a portion of a CDR is replaced with GLP-1) and administering to a subject an immunoglobulin molecule or its fragment (comprising a region where amino acid residues corresponding to at least a portion of a complementarity determining regions (CDR) is replaced with a thiazolidinedione derivative), regulating adiponectin expression (comprising administering to a subject an immunoglobulin molecule or its fragment comprising a region where amino acid residues corresponding to at least a portion of a CDR is replaced with a thiazolidinedione derivative). The immunoglobulin is an anti-tetanus toxoid antibody (Tt) where the heavy chain CDR2 and/or CDR3 are fully or partially replaced with a peptide listed above or (as described in the examples) a Thrombopoietin (TPO) mimetic, erythropoietin (EPO) mimetic or ANP (atrial natriuretic peptide). The molecule, composition and methods are useful for treating congestive heart failure, diabetes or obesity. The present sequence represents a light chain of the anti-tetanus toxoid Fab antibody with engrafted TPO mimetic peptides in place of one or more of its CDRs.

 XX  
 XX Murine scFv 5G1.1M1 (AAR77606) is the product of a DNA construct  
 CC (AAT08479) obtd. from DNA of hybridoma ATCC HB 11625, which produces anti  
 CC -C5 monoclonal antibody (MAB) 5G1.1. Recombinant scFv 5G1.1M1 is obtd. by  
 CC expression of this DNA in Escherichia coli using vector pET Trc S05/N1.  
 CC The light and/or heavy chain CDRs of scFv 5G1.1M1 can be combined with  
 CC CDRs from other 5G1.1-derived antibodies, Fds and light chains (AAR77607-  
 CC 16) in the prodn. of recombinant, including humanised, antibodies that  
 CC retain the ability of MAB 5G1.1 to block human complement C5a generation  
 CC and thus to reduce glomerular inflammation and kidney dysfunction  
 CC associated with glomerulonephritis. (Updated on 25-MAR-2003 to correct PI  
 CC field.)

 PT metabolism and trafficking.  
 XX  
 XX PS Claim 2; Col 43-48; 43pp; English.  
 XX  
 XX This sequence represents rat perilipin B, which is also known as  
 CC NSEQOFB.RAT. Perilipin is the major cAMP-dependent protein kinase  
 CC substrate in lipids, and is found at the surface of the lipid storage  
 CC droplets. In rats, there are two forms of perilipin (perilipin A and  
 CC perilipin B). Perilipin A contains six consensus A-kinase phosphorylation  
 CC sites, consistent with the number of phosphates added upon activation of

CC A-kinase in the cell. Perilipin B lacks three of these consensus A-kinase  
 CC phosphorylation sites. The DNA encoding this sequence was used to isolate  
 CC the human perilipin coding sequence from a human adipocyte cDNA library.  
 CC The protein encoded by the isolated human sequence (see AAW11299), and  
 CC the rat perilipins (this sequence and AAW11300) can be used for studying  
 CC proteins and other molecules on the surface of intracellular lipid  
 CC droplets in adipocytes, that may be involved in lipid metabolism and  
 CC trafficking. The proteins also provide a definitive marker which can be  
 CC used to differentiate true adipocytes from non-adipocyte cells which, as  
 CC a result of pathophysiological conditions, assume adipocyte  
 CC characteristics and become lipid-laden. (Updated on 25-MAR-2003 to  
 CC correct PF field.)

XX Ecdysteroid dependent regulation of genes in mammalian cells - for  
 PT induced expression of heterologous genes.

PS Disclosure; Fig 1; 45pp; English.

XX This sequence represents an ecdysteroid receptor DHR23alpha. DHR23- alpha  
 CC is a Drosophila steroid receptor homologue which can function as a ligand  
 CC -dependant transcription factor in mammalian cells when induced by  
 CC specific ecdysteroids such as DHR23alpha. The activity of DHR23- alpha is  
 CC induced upon administration of certain ecdysteroids but not any of the  
 CC mammalian hormones tested. DHR23alpha has been reported to regulate  
 CC transcription of genes containing ecdysone response elements in  
 CC Drosophila tissue culture cells treated with 20-OH ecdysone. (Updated on  
 CC 25-MAR-2003 to correct PN field.)

XX
XX      Novel gene expression modulation system useful for modulating expression
PT      of a gene of interest, comprising a Group H nuclear receptor ligand
PT      binding domain comprising a substitution mutation.
XX
XX      Disclosure; Page 124-127; 148pp; English.
XX
XX      The present invention relates to a new gene expression modulation system.
CC      The invention comprises a gene expression cassette, capable of being
CC      expressed in a host cell, comprising a polynucleotide that encodes a
CC      polypeptide comprising a transactivation domain, a DNA-binding domain
CC      that recognises a response element associated with a gene whose
CC      expression is to be modulated, and a Group H nuclear receptor ligand
CC      binding domain (LBD). The invention is useful for modulating the
CC      expression of the gene in a host cell which involves introducing into the
CC      host cell, and introducing into the host cell a ligand, where the gene to
CC      be modulated is a component of a gene expression cassette comprising a
CC      response element by the DBD (DNA-binding domain), a promoter that is
CC      activated by the TD (transactivation domain) and a gene whose expression
CC      is to be modulated, where upon introduction of the ligand into the host
CC      cell, expression of the desired gene is modulated. The inducible gene
CC      expression system and its use for modulating gene expression in a host
CC      cell overcome the limitations of currently available inducible expression
CC      systems and provides an effective means for controlling gene expression.
CC      The present amino acid sequence represents an Ecr protein sequence that
CC      was used in the methods of the invention

XX
XX      Composition useful for increasing effect of existing toxins to control
PT      insects, and for inhibiting insect growth, comprises inhibitor of DHR96
PT      activity, and optionally pesticide.
XX
XX      Disclosure; SEQ ID NO 33; 211pp; English.
XX
XX      The invention relates to a composition comprising an inhibitor of DHR96
CC      activity and optionally a pesticide. The invention also relates to an
CC      insect comprising a gene, where the gene comprises a non-naturally
CC      occurring mutation in the DHR96 gene, a method of enhancing the effect a
CC      pesticide has on an insect involving administering to the insect an
CC      inhibitor of DHR96 activity, a method of identifying an inhibitor of
CC      DHR96 activity involving testing compounds for inhibition activity of
CC      DHR96 and/or inhibition of xenobiotic activity and comparing the activity
CC      of these compounds to known inhibitors of DHR96, a method of producing a
CC      composition for inhibiting DHR96 activity involving admixing the
CC      inhibitor with a pesticide and a composition produced by the method. The
CC      composition and method are useful for enhancing the effect a pesticide
CC      has on an insect, for identifying an inhibitor of DHR96 activity, for
CC      identifying ligands for DHR96 and for producing a composition for
CC      inhibiting DHR96 activity. The composition is useful for regulating
CC      DHR96, preferably for inhibiting DHR96 gene expression or activity and
CC      for increasing the effect of existing toxins or pesticides e.g., DDT to
CC      control insects. The composition is useful for controlling insects e.g.,
CC      silverfish, Dragonflies, Stoneflies, beetles, fleas, ants, bees, wasps,
CC      termites etc. and decreases the resistance exhibited by the insects with
CC      respect to toxins or pesticides. This sequence represents a Drosophila
CC      nuclear receptor used in the scope of the invention.

 PT responsible for genetic disorders or other traits and to assess  
 PT biodiversity.  
 XX PS Claim 20; SEQ ID NO 32765; 103pp; English.  
 XX CC The invention relates to isolated polynucleotide (I) and polypeptide (II)  
 CC sequences. (I) is useful as hybridisation probes, polymerase chain  
 CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,  
 CC and in recombinant production of (II). The polynucleotides are also used  
 CC in diagnostics as expressed sequence tags for identifying expressed  
 CC genes. (I) is useful in gene therapy techniques to restore normal  
 CC activity of (II) or to treat disease states involving (II). (II) is  
 CC useful for generating antibodies against it, detecting or quantitating a  
 CC polypeptide in tissue, as molecular weight markers and as a food  
 CC supplement. (II) and its binding partners are useful in medical imaging  
 CC of sites expressing (II). (I) and (II) are useful for treating disorders  
 CC involving aberrant protein expression or biological activity. The  
 CC polypeptide and polynucleotide sequences have applications in  
 CC diagnostics, forensics, gene mapping, identification of mutations  
 CC and to produce other types of data and products dependent on DNA and  
 CC amino acid sequences. ABB00010-ABG30377 represent novel human diagnostic  
 CC amino acid sequences of the invention. Note: The sequence data for this  
 CC patent did not appear in the printed specification, but was obtained in

XX New recombinant DNA construct, useful for improving plant tolerance to  
XX cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or  
XX pests, for conferring increased resistance to plant disease, or for  
XX improving yield.  
XX Claim 1; SEQ ID NO 37962; 15pp; English.  
XX The invention describes a recombinant DNA construct comprising a  
XX polynucleotide consisting of a sequence encoding an amino acid sequence  
XX available in electronic form from the US patent office at  
XX ftp.segdata.uspto.gov/sequence.html?docID:2004034888. The polynucleotide  
XX of the invention are also useful in physical arrays of molecules and as  
XX plant breeding markers. The recombinant DNA construct is useful for  
XX improving plant tolerance to cold, heat, drought, herbicides, extreme  
XX osmotic conditions, pathogens or pests, for manipulating growth rate in  
XX plant cells by modification of the cell cycle pathway, for conferring  
XX increased resistance to plant disease, for producing galactomannan,  
XX lignin or plant growth regulators, for increasing the rate of homologous  
XX recombination in plants, for improving yield by modification of  
XX photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake  
XX or by providing improved plant growth and development under at least one  
XX stress condition or for modifying seed oil or protein yield and/or  
XX content. This is the amino acid sequence of a plant full length insert  
XX polypeptide that can be used in the recombinant DNA construct of the  
XX invention.

XX New antisense nucleic acids, useful for identifying proteins or screening  
XX for homologous nucleic acids required for cellular proliferation to  
XX isolate candidate molecules for rational drug discovery programs.  
XX Claim 25; SEQ ID NO 63096; 1766pp; English.  
XX The invention relates to an isolated nucleic acid comprising any one of  
XX the 6213 antisense sequences given in the specification where expression  
XX of the nucleic acid inhibits proliferation of a cell. Also included are:  
XX (1) a vector comprising a promoter operably linked to the nucleic acid  
XX encoding a polypeptide whose expression is inhibited by the antisense  
XX nucleic acid; (2) a host cell containing the vector; (3) an isolated  
XX polypeptide or its fragment whose expression is inhibited by the  
XX antisense nucleic acid; (4) an antibody capable of specifically binding  
XX the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular  
XX proliferation or the activity of a gene in an operon required for  
XX proliferation; (7) identifying a compound that influences the activity of  
XX the gene product or that has an activity against a biological pathway  
XX required for proliferation, or that inhibits cellular proliferation; (8)  
XX identifying a gene required for cellular proliferation or the biological  
XX pathway in which a proliferation-required gene or its gene product lies  
XX on a gene on which the test compound that inhibits proliferation of an  
XX organism acts; (9) manufacturing an antibiotic; (10) profiling a  
XX compound's activity; (11) a culture comprising strains in which the gene  
XX product is overexpressed or underexpressed; (12) determining the extent  
XX to which each of the strains is present in a culture or collection of  
XX strains; or (13) identifying the target of a compound that inhibits the  
XX proliferation of an organism. The antisense nucleic acids are useful for  
XX identifying proteins or screening for homologous nucleic acids required  
XX for cellular proliferation to isolate candidate molecules for rational  
XX drug discovery programs, or for screening homologous nucleic acids  
XX K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of  
XX the target prokaryotic essential genes. Note: The sequence data for this  
XX patent did not form part of the printed specification, but was obtained  
XX in electronic format directly from WIPO at  
XX ftp.wipo.int/pub/published\_pct\_sequences

XX  
XX New transgenic plant comprising a recombinant polynucleotide of any one  
PT of more than 500 nucleotide sequences, useful in bioinformatic search  
PT methods.  
XX  
XX Claim 1; SEQ ID NO 1405; 435pp; English.  
XX  
XX The invention describes a transgenic plant comprising a recombinant  
CC polynucleotide of any one of more than 500 nucleotide sequences fully  
CC defined in the specification or its complement. The method of the  
CC invention can be used to produce a plant having altered traits such as:  
CC enhanced tolerance to abiotic stress; glycosylphosphate tolerance; hormone  
CC sensitivity; disease resistance; sugar sensing; early or late flowering;  
CC altered flower structure, change in stem bifurcations, altered branching  
CC pattern, reduced apical dominance, reduced trichome density; lack of  
CC trichomes; reduced ectopic trichome development; altered trichome  
CC development; increase in trichome number; altered stem morphology;  
CC increased root growth; increased root hairs; altered seed development;  
CC altered cell proliferation or cell differentiation; rapid development;  
CC premature senescence; increased necrosis; increase in seedling or plant  
CC size; decreased plant size; leaf morphology; seed morphology; seed  
CC biochemistry; increase in root anthocyanins; increase in plant  
CC anthocyanins; or alteration in light response or shade avoidance. The  
CC transgenic plant, polynucleotides and polypeptides are useful in  
CC bioinformatic search methods. This is the amino acid sequence of a plant  
CC transcription factor, and an orthologue of Arabidopsis thaliana  
CC transcription factors isolated in the invention, that can be used in the

CC creation of a transgenic plant with altered traits.

XX New polynucleotides encoding plant transcription factors, useful in  
PT producing plants with increased biomass and abiotic stress tolerance.

XX Disclosure; SEQ ID NO 34; 130pp; English.

XX The invention relates to an isolated polynucleotide (ADQ16209, ADQ16211 or  
CC ADQ16213) encoding an Arabidopsis thaliana AT-hook domain-containing  
CC

transcription factor (e.g. ADQ16210 or ADQ16212). Also included are an expression vector comprising the polynucleotide, a cultured host cell transformed with the polynucleotide, a transgenic plant comprising a polynucleotide (or comprising a recombinant polynucleotide encoding a polypeptide having an AT-hook domain homologous to the AT-hook domain of ADQ16210) and producing a transgenic plant having increased tolerance to abiotic stress and/or increased biomass. The polypeptide comprising an AT-hook domain is overexpressed compared to wild-type, and the hook domain is sufficiently homologous to that of ADQ16210 that the polypeptide binds to the narrow minor groove of AT-rich regions of DNA and regulates transcription. Also disclosed as new are further A. thaliana polynucleotides encoding AT-hook domain-containing transcription factors and species homologues. The polynucleotides, polypeptides and methods are useful in producing plant with increased biomass and abiotic stress tolerance, e.g. osmotic stress such as drought, salt stress, heat stress or germination in cold condition. The present sequence represents a AT-hook domain-containing transcription factor.

 CC The A. baumannii nucleic acids and polypeptides are useful as reagents  
 CC for diagnosing a bacterial disease, as components of antibacterial  
 CC vaccines, as targets for antibacterial drugs, to detect the presence of  
 CC A. baumannii and other Acinetobacter species in a sample, in screening  
 CC compounds for the ability to interfere with the A. baumannii life cycle  
 CC or to inhibit A. baumannii infection, and as biocontrol agents for  
 CC plants. The present sequence represents the amino acid sequence of an A.  
 CC baumannii protein.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 RL J. Biol. Chem. 279:42062-42071(2004).  
 CC -!- FUNCTION: Modulator of adipocyte lipid metabolism, it coats lipid storage droplets to protect them to be broken down by hormone-sensitive lipase (HSL). Its absence may result in leanness (By similarity).  
 CC -!- SUBUNIT: Interacts with ABHD5.  
 CC -!- SUBCELLULAR LOCATION: Lipid droplet surface-associated (By similarity).  
 CC -!- PTM: Major cAMP-dependent protein kinase-substrate in adipocytes, also dephosphorylated by pp1. When phosphorylated, may be maximally sensitive to HSL and when unphosphorylated, may play a role in the inhibition of lipolysis, by acting as a barrier in lipid droplet (By similarity).  
 CC -!- SIMILARITY: Belongs to the perilipin family.  
 CC -!- DATABASE: NAME=Protein SpotLight; NOTE=Issue 10 of May 2001; WWW="http://www.expasy.org/spotlight/back\_issues/sptlt010.shtml".

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

RESULT 1
US-09-155-106-5
; Sequence 5, Application US/09155106
; Patent No. 6730300
; GENERAL INFORMATION:
; APPLICANT:
; TITLE OF INVENTION: HUMANIZATION OF AN ANTI-CARCINOEMBRYONIC
; TITLE OF INVENTION: ANTIGEN ANTI-IDIOTYPE ANTIBODY AND USE AS A TUMOR VACCINE
; TITLE OF INVENTION: AND FOR TARGETING APPLICATIONS
; NUMBER OF SEQUENCES: 45
; COMPUTER READABLE FORM:
; MEDIUM TYPE: Floppy disk
; COMPUTER: IBM PC compatible
; OPERATING SYSTEM: PC-DOS/MS-DOS
; SOFTWARE: PatentIn Release #1.0, Version #1.30
; CURRENT APPLICATION DATA: US/09/155,106
; FILING DATE:
; PRIOR APPLICATION DATA:
; APPLICATION NUMBER: PCT/US97/04696
; FILING DATE: 19-MAR-1997
; APPLICATION NUMBER: US 60/013,708
; FILING DATE: 20-MAR-1996
; INFORMATION FOR SEQ ID NO: 5:
; SEQUENCE CHARACTERISTICS:
; LENGTH: 7 amino acids
; TYPE: amino acid
; STRANDEDNESS:
; TOPOLOGY: linear
; MOLECULE TYPE: peptide

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Chimeric and humanised anti-carcinoembryonic antigen anti-idiotypic  
 antibodies - useful in detection of anti-CEA antibodies and as vaccine to  
 stimulate immune response against cancer.

Claim 4; Page 30; 46pp; English.

This sequence represents the complementarity determining region-3 (CDR-3)  
 of the rWI2 light chain. This sequence is used in an antibody of the  
 invention. The antibody of the invention is a chimeric or humanised anti-  
 idiotype antibodies (cab and hab, respectively) or a fragment which  
 specifically binds to the idiotype region of an anti-carcinoembryonic

CC antigen (CEA), where: (i) cab comprises the rWI2 light (L) and heavy (H)  
 CC chain variable regions, or silent mutations; and (ii) hab comprises rWI2  
 CC complementarity determining regions (CDR) and humanised framework (FR)  
 CC regions. The hab is used as a vaccine to stimulate an immune response in  
 CC a patient against cancers expressing CEA. The hab, can be used to clear  
 CC non-targeted antibody in a method of diagnosis or treatment of a patient  
 CC where a CEA antibody is used as a (pre-)targeting or therapy agent. The  
 CC cab is used to detect the presence of an antibody that specifically binds  
 CC to CEA in a sample

 XX New isolated nucleic acid detection reagent for detecting 1000 or more  
 PT genes from Drosophila and for elucidating cell signaling and cell-cell  
 PT interactions.  
 PT  
 XX Disclosure; SEQ ID NO 32997; 21pp + Sequence Listing; English.  
 PS  
 XX The invention relates to an isolated nucleic acid detection reagent  
 CC capable of detecting 1000 or more genes from Drosophila. The invention is  
 CC useful in developmental biology and in elucidating cell signalling and  
 CC cell-cell interactions in higher eukaryotes for the development of  
 CC insecticides, therapeutics and pharmaceutical drugs. The invention  
 CC discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA  
 CC sequences (ABL01840-ABL16175) and the encoded proteins (ABBS7737-  
 CC ABB72072). The sequence data for this patent did not form part of the  
 CC printed specification, but was obtained in electronic format directly  
 CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

 PS Claim 18; SEQ ID NO 121; 185pp; English.  
 XX  
 CC The invention relates to identifying a compound comprising exposing cell  
 CC expressing gene 1 having enhancing or suppression effect on an APP-L-SV  
 CC phenotype (a transgenic fruit fly expressing the Amyloid precursor-like  
 CC protein, APP, as a fusion protein with the suppressor of hairless  
 CC transcription factor, Su(H) and VPI6 activation domain. The fusion  
 CC protein is cleaved by gamma secretase (encoded by the Psn gene) to  
 CC release the Su(H-VPI6, which affects wing vein development. Genes  
 CC affecting Psn expression/activity were screened by crossing the APP-SV  
 CC line with an EP P-element insertion library, and the DNA recovered from  
 CC the appropriate EP strain and sequenced) chosen from ADO00863-ADO0964,  
 CC being the identified fruit fly genes affecting APP processing and their  
 CC mammalian homologues, identifying modulation of Alzheimer's disease (AD)  
 CC symptom, regulation of biological pathway, gene expression or protein  
 CC function associated with AD relative to cell in absence of agent. Also  
 CC included are regulating AD (involves providing a subject with AD or  
 CC symptoms of AD and an agent that changes the expression of a gene  
 CC detailed above or changes the activity of a polypeptide having a sequence  
 CC chosen from ADO00965-ADO01066, and treating the subject with the agent)  
 CC and a composition (comprising a nucleic acid encoding a polypeptide  
 CC detailed above or an expression vector comprising the nucleic acid or a  
 CC host cell comprising the expression vector or an antisense  
 CC oligonucleotide that hybridises under stringent conditions to the nucleic  
 CC acid or polypeptide or an antibody that specifically binds to the  
 CC polypeptide). The method is useful for identifying compounds modulating  
 CC symptom of Alzheimer's disease (AD), regulation of biological pathway  
 CC associated with AD, or regulation of gene expression or protein function  
 CC of gene or protein associated with AD. The nucleic acids and proteins are  
 CC useful in drug screening and useful in screening and treating the subject  
 CC having increased susceptibility to AD or symptoms of AD such as dementia,  
 CC memory loss, language deterioration and impaired visuospatial skills. The  
 CC present sequence is a fruit fly protein from a gene identified as having  
 CC an effect on the APP-SV phenotype.

XX

XX The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABU16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABE57737-ABE72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

XX Novel anti-prostate stem cell antigen (PSCA) antibody that internalizes on binding to PSCA on mammalian cell and inhibits growth of PSCA-expressing cancer cells in vivo, useful for killing PSCA-expressing cancer cells.

XX

XX Claim 22; Fig 12; 112pp; English.

XX

XX The present sequence is murine prostate stem cell antigen (PSCA) antibody (Ab) light chain variable region domain (VL) from hybridoma clone 5F2.4H4.1E3, A#2403. PSCA is a single subunit glycoprotein that is expressed on the cell surface as a glycosylphosphatidylinositol (GPI)-anchored protein. The present invention relates to anti-PSCA antibody composition and methods of killing PSCA-expressing cancer cells. PSCA is useful for inhibiting and killing the growth of PSCA-expressing cancer cells such as prostate cancer, bladder cancer or lung cancer cells. Humanised antibody conjugated to a toxin or a radioactive isotope is used for killing the cancer cells. PSCA is useful for specifically targeting PSCA-expressing tumour cells in vivo and for inhibiting or killing these cells. The antibodies are also useful for treating the above mentioned cancers and for diagnosing and staging of PSCA-expressing cancer, for purification or immunoprecipitation of PSCA from cells, and for detection and quantitation of PSCA in vitro. PSCA DNA is also useful for treating cancers by gene therapy techniques

XX Disclosure; Fig 36A-B; 219pp; English.  
XX  
XX The invention provides a neuromodulatory agent (I) capable of promoting  
CC neurite outgrowth, regeneration, remyelination and neuroprotection in  
CC central nervous system (CNS). (I) is capable of inducing remyelination,  
CC promoting cellular proliferation of glial cells, and promoting Ca2+  
CC signaling with oligodendrocytes. An humanised antibody to (I) can be  
CC selected from antibody sHGM22 (LYM 22), ebvHGM Mail19D10, ebv HGM  
CC CB2bG8, AKJR4, CB2iE12, CB2iE7 or MS119E5. (I) is useful for stimulating  
CC remyelination of CNS axons, stimulating proliferation of glial cells in  
CC CNS axons, or treating demyelinating disease of CNS in a mammal in need  
CC of such therapy. (I) is capable of binding to structures and cells within  
CC CNS. (I) is preferably useful for treating a demyelinating disease of CNS  
CC of a mouse infected with Strain DA of Theiler's murine encephalomyelitis  
CC (TMEV) or for treating a human being having multiple sclerosis, or a  
CC human or domestic animal with a viral demyelinating disease, or a post-  
CC neural disease of CNS. (I) is also useful for an in vitro method of  
CC stimulating the proliferation of glial cells from mixed cell culture. (I)  
CC is also useful for stimulating remyelination of CNS axons. The antibodies  
CC are useful for preventing infection by a bacterium, virus or like  
CC pathogen that causes demyelination or other neurodegenerative condition  
CC in a subject. Methods where (I) is administered to a patient are useful  
CC for treating multiple sclerosis, Parkinson's disease, Alzheimer's  
CC disease, amyotrophic lateral sclerosis (ALS), a viral demyelinating  
CC disease, CNS diseases, and other conditions in the CNS where nerves are  
CC damaged as by trauma. The present sequence represents the mouse 09

The invention relates to an antibody (I) produced by injecting an immunocompetent host with an antibody peptide, and harvesting the antibody, where the peptide comprises a human anti-IgM antibody fragment given in the specification, or active fragments. Also included are stimulating remyelination of central nervous system (CNS) axons in a mammal (comprising administering a monoclonal antibody, or mixtures, monomers, active fragments, or recombinant antibodies derived from it, characterised by their ability to bind structures and cells within the CNS, including oligodendrocytes), stimulating the proliferation of glial cells in CNS axons in a mammal (comprising administering a monoclonal antibody, or mixtures, monomers, active fragments, or recombinant antibodies derived from it, characterised by their ability to bind structures and cells within the CNS), treating or preventing a demyelinating disease of the CNS in a mammal (comprising administering a monoclonal antibody, or mixtures, monomers, active fragments, or recombinant antibodies derived from it, characterised by their ability to bind structures and cells within the CNS), and to stimulate remyelination of axons of the CNS), stimulating, in vitro, the proliferation of glial cells from mixed cell culture, stimulating remyelination of CNS axons in a mammal, a DNA sequence (or degenerate variant of it) which encodes an antibody (or a peptide analogue, hapten, or active fragment of it, where the DNA sequence consists of a sequence encoding an anti IgM antibody), a probe capable of screening for the antibody, an assay for screening drugs

and other agents for the ability to modulate the production or mimic the activities of mAb sHGM22, sHGM46, or combinations of them, a recombinant virus transformed with recombinant antibody nucleic acids or vector, imaging a portion of the CNS using the antibody and diagnosing or monitoring demyelination and/or remyelination of the CNS comprising using CNS image. The antibody is used to stimulate remyelination of CNS axons, and to stimulate the proliferation of glial cells in CNS axons, optionally in vitro. The antibody is used to treat or prevent a demyelinating disease of the CNS in a human or domestic animal, such as multiple sclerosis, or a disease, other injury or dysfunction of the CNS, preferably the mammal is a mouse infected with Strain DA of Theiler's murine encephalomyelitis virus. The antibody is used to treat a spinal cord injury and used to screen drugs and other agents for the ability to modulate the production or mimic the activities of the antibody. The antibody can be used to image a portion of the CNS which can be used to diagnose or monitor demyelination and/or remyelination of the CNS. The present sequence is a variable region of a mouse anti-IgM antibody (or fragment).

XX  
 CC The invention relates to an antibody (I) produced by injecting an  
 CC immunocompetent host with an antibody peptide, and harvesting the  
 CC antibody, where the peptide comprises a human anti-IgM antibody fragment  
 CC given in the specification, or active fragments. Also included are  
 CC stimulating remyelination of central nervous system (CNS) axons in a  
 CC mammal (comprising administering a monoclonal antibody, or mixtures,  
 CC monomers, active fragments, or recombinant antibodies derived from it,  
 CC characterised by their ability to bind structures and cells within the  
 CC CNS, including oligodendrocytes), stimulating the proliferation of glial  
 CC cells in CNS axons in a mammal (comprising administering a monoclonal  
 CC antibody, or mixtures, monomers, active fragments, or recombinant  
 CC antibodies derived from it, characterised by their ability to bind  
 CC structures and cells within the CNS), treating or preventing a  
 CC demyelinating disease of the CNS in a mammal (comprising administering a  
 CC monoclonal antibody, or mixtures, monomers, active fragments, or  
 CC recombinant antibodies derived from it, characterised by their ability to  
 CC bind structures and cells within the CNS, and to stimulate remyelination  
 CC of axons of the CNS), stimulating, in vitro, the proliferation of glial  
 CC cells from mixed cell culture, stimulating remyelination of CNS axons in

CC a mammal, a DNA sequence (or degenerate variant of it) which encodes an  
 CC antibody (or a peptide analogue, hapten, or active fragment of it, where  
 CC the DNA sequence consists of a sequence encoding an anti Igm antibody), a  
 CC probe capable of screening for the antibody, an assay for screening drugs  
 CC and other agents for the ability to modulate the production or mimic the  
 CC activities of mAb sHlgM22, sHlgM46, or combinations of them, a  
 CC recombinant virus transformed with recombinant antibody nucleic acids or  
 CC vector, imaging a portion of the CNS using the antibody and diagnosing or  
 CC monitoring demyelination and/or remyelination of the CNS comprising using  
 CC CNS image. The antibody is used to stimulate remyelination of CNS axons,  
 CC and to stimulate the proliferation of glial cells in CNS axons,  
 CC optionally in vitro. The antibody is used to treat or prevent a  
 CC demyelinating disease of the CNS in a human or domestic animal, such as  
 CC multiple sclerosis, or a disease, other injury or dysfunction of the CNS,  
 CC preferably the mammal is a mouse infected with Strain DA of Theiler's  
 CC murine encephalomyelitis virus. The antibody is used to treat a spinal  
 CC cord injury and used to screen drugs and other agents for the ability to  
 CC modulate the production or mimic the activities of the antibody. The  
 CC antibody can be used to image a portion of the CNS which can be used to  
 CC diagnose or monitor demyelination and/or remyelination of the CNS. The  
 CC present sequence is a variable region of a mouse anti-Igm antibody (or  
 CC fragment).

XX PT Phage display system for identification of binding site domains retaining  
 XX capacity to bind an epitope.  
 XX PS Claim 27; Fig 6.3; 152pp; English.

XX The invention relates to a method of identifying binding site domains  
 CC (BSD) that retain the capacity of binding to a predetermined epitope when  
 CC positioned C-terminal of at least one further domain in a recombinant bi-  
 CC or multivalent polypeptide. The method comprises (a) testing a panel of

CC BSD displayed on the surface of a biological display system as part of a  
 CC fusion protein for binding to a predetermined epitope, where the fusion  
 CC protein comprises an additional domain positioned N-terminal of the BSD  
 CC and an amino acid sequence that mediates anchoring of the fusion protein  
 CC to the surface of the display system; and (b) identifying a BSD that  
 CC binds to the predetermined epitope. The method is useful to identify bi-  
 CC or multivalent polypeptides that comprise antibody binding sites capable  
 CC of efficiently binding to the corresponding antigen. The polypeptides or  
 CC antibodies identified by the method are useful therapeutically and  
 CC diagnostically, for e.g. cancer and autoimmune diseases. ScFv-antibody  
 CC fragments that bind independently of their position within bifunctional  
 CC single-chain fusion proteins can be isolated from combinatorial antibody  
 CC libraries using the new in vitro method. Sequences AAY17957-965 represent

 PT construct, useful for preventing, treating or ameliorating a tumorous  
 PT disease, such as an epithelial or minimal residual cancer.  
 XX Claim 12; SEQ ID NO 36; 227pp; English.  
 XX The invention comprises a composition that contains a bispecific single  
 CC chain antibody consisting of at least two domains, where one of domains  
 CC binds to human epithelial cell adhesion molecule (EPCAM) antigen, and the  
 CC second domain binds to human CD3 antigen. The bispecific antibody  
 CC construct of the invention is useful for the prevention, treatment or  
 CC amelioration of a tumorous disease, such as an epithelial or minimal  
 CC residual cancer. The present amino acid sequence represents a bispecific  
 CC single chain antibody of the invention.

XX KW New NOVX polypeptides and nucleic acids, useful for preventing or
PT treating NOVX-associated disorders, e.g. cancer, cardiomyopathy,
PT atherosclerosis, or diabetes, and in chromosome mapping, tissue typing or
PT pharmacogenomics.
XX PS Disclosure; SEQ ID NO 491; 1498pp; English.
XX PR This invention relates to a novel nucleic acids, and encoded polypeptides
XX thereof, which have properties related to the stimulation of biochemical
XX or physiological responses in a cell, tissue, organ or organism.
XX Specifically, it refers to the use of biologically active fragments for
XX diagnostic and prognostic assays and furthermore in the treatment of
XX diverse pathological conditions. The present invention describes novel
XX human and murine NOVX proteins, as well as methods to modulate their
XX expression using antisense oligos, ribozymes and peptide nucleic acids.
XX The NOVX polypeptides, polynucleotides and antibodies are useful in
XX treating or preventing NOVX-associated disorders, e.g. cardiomyopathy,
XX atherosclerosis, cancer and diabetes. Furthermore, they may be used in
XX treating or preventing diseases such as inflammation, autoimmune
XX disorders, allergies, blood disorders, acquired immunodeficiency syndrome
XX (AIDS), obesity, asthma, immunoglobulin (Ig)A nephropathy, cirrhosis,
XX arthritis, Alzheimer's disease, infections, stroke, muscular dystrophy
XX and epilepsy. Accordingly, these molecules have many activities including
XX cytostatic, cardiant, antiinflammatory, immunosuppressive, antiallergic,
XX haemostatic, anti-HIV, antidiabetic, antiarteriosclerotic, anorectic,
XX antiathmatic, nephrotropic, antiarthritic, hepatotropic,
XX neuroprotective, nootropic, antibacterial, virucide, antiparasitic,
XX relaxant and anticonvulsant. In addition, they are useful in screening
XX assays to identify small molecules that modulate or inhibit, for example,
XX neurogenesis, wound healing and angiogenesis. The nucleic acids are also
XX used as in chromosome mapping, tissue typing, preventive medicine and
XX pharmacogenomics. This polypeptide is a homologue of a human NOVX protein
XX of the invention.

 DR New isolated antibody that neutralizes botulinum neurotoxin type A,  
 XX useful for diagnosing botulism or for treating pathologies associated  
 PT with botulinum neurotoxin poisoning.  
 PT  
 PS Example 4; SEQ ID NO 273; 110pp; English.  
 XX  
 CC The invention describes an isolated antibody (I) that specifically binds  
 CC to an epitope specifically bound by an antibody expressed by a specific  
 CC clone where (i) binds to and neutralizes botulinum neurotoxin type A  
 CC (BoNT/A). An isolated antibody (I) that specifically binds to an epitope  
 CC specifically bound by an antibody expressed by a clone chosen from clone  
 CC S25, C29, C39, IC6, 3D12, B4, 1F3, hUC25, Ar1, Ar2, WRI(V), WRI(T), 3-1,  
 CC 3-8, 3-10 and ING1, where (i) binds to and neutralizes botulinum  
 CC neurotoxin type A (BoNT/A). Also described are: a polypeptide (II)  
 CC comprising BoNT/A neutralising epitope having an epitope that is  
 CC specifically bound by an antibody expressed by clones as mentioned in (I)  
 CC ; producing (I); and a composition (III) comprising several anti-  
 CC botulinum neurotoxin antibodies, where each antibody is specific for a  
 CC different epitope of a botulinum neurotoxin and the combination of  
 CC antibodies shows greater toxin neutralisation than the single antibodies  
 CC in surplus. The following are disclosed: a pharmaceutical composition  
 CC comprising (I); and a kit comprising (I). (I) is useful for neutralising  
 CC BoNT/A antibody and for neutralising a botulinum neurotoxin which  
 CC involves contacting neurotoxin with (I) in surplus, where each of (I) is  
 CC specific for a different epitope of the botulinum neurotoxin and the  
 CC combination of antibodies shows greater toxin neutralisation than the  
 CC single antibodies in surplus. (I) is useful for diagnosing the botulism  
 CC or for treating pathologies associated with botulinum neurotoxin  
 CC poisoning. (I) exhibits specificity and affinity towards BoNT/A. (I)  
 CC enables rapid detection or diagnosis of botulism. This is the amino acid  
 CC sequence of mouse light chain anti-BoNT-antibody CDR3.

 XX  
 PS Claim 17; SEQ ID NO 86; 106pp; Japanese.  
 XX  
 CC The invention describes an antibody is a single-chain polypeptide with  
 CC TPO (thrombopoietin) receptor (Mpl)-binding activity that contains the 2  
 CC heavy-chain variable regions and 2 light-chain variable regions. Also  
 CC described are: a chimeric antibody for binding with Mpl; an antibody for  
 CC binding with soluble Mpl; antibodies for binding with human Mpl and  
 CC monkey Mpl; antibodies with agonistic activity against human Mpl and  
 CC monkey Mpl; antibodies with binding activity for soluble Mpl; antibodies  
 CC with TPO agonistic activity; antibodies containing a heavy-chain variable  
 CC region with CDR (complementary-determinant regions 1, 2 and 3);  
 CC antibodies containing a light-chain variable region with CDR 1, 2 and 3;  
 CC antibodies containing heavy and light-chain variable regions with CDR 1,  
 CC 2 and 3 selected from the already-specified groups in 18 combinations;  
 CC antibodies containing a heavy-chain variable region with FRI, 2, 3 and 4;  
 CC antibodies containing a light-chain variable region FRI, 2, 3 and 4;  
 CC epitope-recognizing antibodies that can recognize the antibodies with the  
 CC heavy and light-chain variable regions and amino acid sequences;  
 CC antibodies that can recognize the amino acid moiety in human Mpl from  
 CC positions 26-274; polynucleotides encoding these antibodies;  
 CC polynucleotides hybridizable with the polynucleotides that encode the  
 CC antibodies under stringent conditions and the antibodies encoded by which  
 CC have equivalent activity as such antibodies; vectors containing these  
 CC polynucleotides; host cells carrying such polynucleotides or vectors; and  
 CC drug compositions containing these antibodies. The antibodies are  
 CC applicable in drug compositions for use in chemotherapy of  
 CC thrombocytopenia and other diseases associated with Mpl mutation such as  
 CC congenital amegakaryocytic thrombocytopenia. These antibodies can include  
 CC antihuman Mpl antibody and variants like genetically-engineered antihuman  
 CC Mpl diabody and (humanized) antihuman Mpl sc(Fv)2. Such antibodies are  
 CC soluble to enhance binding ability. The diabody and sc(Fv)2 show high  
 CC agonistic activity against antihuman Mpl antibody, such activity of which  
 CC is comparable or superior to that of the natural ligand, human TPO. This  
 CC is the amino acid sequence of an anti-TPO antibody complementarity  
 CC determining region (CDR).

XX Anti-Mpl antibodies including antihuman Mpl antibody and variants like  
 PT genetically-engineered antihuman Mpl diabody, applicable in drug  
 PT compositions for use in chemotherapy of thrombocytopenia and other  
 PT diseases associated with Mpl mutation.  
 XX  
 PS Disclosure; SEQ ID NO 107; 106pp; Japanese.  
 XX

CC The invention describes an antibody is a single-chain polypeptide with  
 CC TPO (thrombopoietin) receptor (Mpl)-binding activity that contains the 2  
 CC heavy-chain variable regions and 2 light-chain variable regions. Also  
 CC described are: a chimeric antibody for binding with Mpl; an antibody for  
 CC binding with soluble Mpl; antibodies for binding with human Mpl and  
 CC monkey Mpl; antibodies with agonistic activity against human Mpl and  
 CC monkey Mpl; antibodies with binding activity for soluble Mpl; antibodies  
 CC with TPO agonistic activity; antibodies containing a heavy-chain variable  
 CC region with CDR (complementary-determinant regions 1, 2 and 3);  
 CC antibodies containing a light-chain variable region with CDR 1, 2 and 3;  
 CC antibodies containing heavy and light-chain variable regions with CDR 1,  
 CC 2 and 3 selected from the already-specified groups in 18 combinations;  
 CC antibodies containing a heavy-chain variable region with FRI, 2, 3 and 4;  
 CC antibodies containing a light-chain variable region FRI, 2, 3 and 4;  
 CC epitope-recognizing antibodies that can recognize the antibodies with the  
 CC heavy and light-chain variable regions and amino acid sequences;  
 CC antibodies that can recognize the an amino acid moiety in human Mpl from  
 CC positions 26-274; polynucleotides encoding these antibodies;  
 CC polynucleotides hybridizable with the polynucleotides that encode the  
 CC antibodies under stringent conditions and the antibodies encoded by which  
 CC have equivalent activity as such antibodies; vectors containing these  
 CC polynucleotides; host cells carrying such polynucleotides or vectors; and  
 CC drug compositions containing these antibodies. The antibodies are  
 CC applicable in drug compositions for use in chemotherapy of  
 CC thrombocytopenia and other diseases associated with Mpl mutation such as  
 CC congenital amegakaryocytic thrombocytopenia. These antibodies can include  
 CC antihuman Mpl antibody and variants like genetically-engineered antihuman  
 CC Mpl diabody and (humanized) antihuman Mpl sc(Fv)2. Such antibodies are  
 CC soluble to enhance binding ability. The diabody and sc(Fv)2 show high  
 CC agonistic activity against antihuman Mpl antibody, such activity of which  
 CC is comparable or superior to that of the natural ligand, human TPO. This  
 CC is the amino acid sequence of an anti-TPO antibody complementarity  
 CC determining region (CDR).

 CC antibodies containing a heavy-chain variable region with FRL 1, 2, 3 and 4;  
 CC epitopes-recognizing antibodies that can recognize the antibodies with the  
 CC heavy and light-chain variable regions and amino acid sequences;  
 CC antibodies that can recognize the an amino acid moiety in human Mpl from  
 CC positions 26-274; polynucleotides encoding these antibodies;  
 CC polynucleotides hybridizable with the polynucleotides that encode the  
 CC antibodies under stringent conditions and the antibodies encoded by which  
 CC have equivalent activity as such antibodies; vectors containing these  
 CC polynucleotides; host cells carrying such polynucleotides or vectors; and  
 CC drug compositions containing these antibodies. The antibodies are  
 CC applicable in drug compositions for use in chemotherapy of  
 CC thrombocytopenia and other diseases associated with Mpl mutation such as  
 CC congenital megakaryocytic thrombocytopenia. These antibodies can include  
 CC antihuman Mpl antibody and variants like genetically-engineered antihuman  
 CC Mpl diabody and (humanized) antihuman Mpl sc(Fv)2. Such antibodies are  
 CC soluble to enhance binding ability. The diabody and sc(Fv)2 show high  
 CC agonistic activity against antihuman Mpl antibody, such activity of which  
 CC is comparable or superior to that of the natural ligand, human TPO. This  
 CC is the amino acid sequence of an anti-TPO antibody complementarity  
 CC determining region (CDR).

 XX  
 XX The invention describes an antibody is a single-chain polypeptide with  
 CC TPO (thrombopoietin) receptor (Mpl)-binding activity that contains the 2  
 CC heavy-chain variable regions and 2 light-chain variable regions. Also  
 CC described are: a chimeric antibody for binding with Mpl; an antibody for  
 CC binding with soluble Mpl; antibodies for binding with human Mpl and  
 CC monkey Mpl; antibodies with agonistic activity against human Mpl and  
 CC monkey Mpl; antibodies with binding activity for soluble Mpl; antibodies  
 CC with TPO agonistic activity; antibodies containing a heavy-chain variable  
 CC region with CDR (complementary-determinant regions 1, 2 and 3);  
 CC antibodies containing a light-chain variable region with CDR 1, 2 and 3;  
 CC antibodies containing heavy and light-chain variable regions with CDR 1,  
 CC 2 and 3 selected from the already-specified groups in 18 combinations;  
 CC antibodies containing a heavy-chain variable region with FRL 1, 2, 3 and 4;  
 CC epitopes-recognizing antibodies that can recognize the antibodies with the  
 CC heavy and light-chain variable regions and amino acid sequences;  
 CC antibodies that can recognize the an amino acid moiety in human Mpl from  
 CC positions 26-274; polynucleotides encoding these antibodies;  
 CC polynucleotides hybridizable with the polynucleotides that encode the  
 CC antibodies under stringent conditions and the antibodies encoded by which  
 CC have equivalent activity as such antibodies; vectors containing these  
 CC polynucleotides; host cells carrying such polynucleotides or vectors; and  
 CC drug compositions containing these antibodies. The antibodies are  
 CC applicable in drug compositions for use in chemotherapy of  
 CC thrombocytopenia and other diseases associated with Mpl mutation such as  
 CC congenital megakaryocytic thrombocytopenia. These antibodies can include  
 CC antihuman Mpl antibody and variants like genetically-engineered antihuman  
 CC Mpl diabody and (humanized) antihuman Mpl sc(Fv)2. Such antibodies are  
 CC soluble to enhance binding ability. The diabody and sc(Fv)2 show high  
 CC agonistic activity against antihuman Mpl antibody, such activity of which  
 CC is comparable or superior to that of the natural ligand, human TPO. This  
 CC is the amino acid sequence of an anti-TPO antibody complementarity

 XX Production of antibody catalysts, useful as anti-virals, anti-cancer  
 PT agents, anti-thrombotics, and general enzymes.  
 XX  
 XX Example 14; Fig 11; 44pp; Japanese.  
 PS  
 XX The present invention describes a new process for producing an antibody  
 CC catalyst capable of cleaving and/or decomposing a target protein or  
 CC peptide. The process comprises the construction of a monoclonal antibody  
 CC with use of the protein, peptide or peptide fragment as antigen, and  
 CC recovering the antibody catalyst from the produced monoclonal antibody.  
 CC The antibody catalysts can be used as anti-virals, anti-cancer agents,  
 CC anti-thrombotics, and general enzymes, for example, the anti-gp 41  
 CC antibody light chain is capable of cleaving the peptide YP41-1 and  
 CC protein gp41 of HIV which is therefore a good anti-HIV agent. The present  
 CC sequence represents a protein used in an example from the present  
 CC invention

 XX Reinforcing activity of antibody e.g. antihuman Mpl antibody by coupling  
 PT heavy chain variable domains to light chain variable domains by linker,  
 PT to produce single chain polypeptide.  
 XX  
 XX Example 2; SEQ ID NO 27; 44pp; Japanese.  
 PS  
 XX This invention relates to a novel method of reinforcing activity of an  
 CC antibody, for example antihuman Mpl antibody. The method comprises  
 CC coupling 2 or more heavy chain variable domains to 2 or more light chain  
 CC variable domains by a linker to produce a single chain polypeptide, or  
 CC coupling a first polypeptide having a heavy chain and light chain

CC variable domain of an antibody and a second polypeptide having a heavy  
 CC chain and light chain variable domain of an antibody by a linker. The  
 CC invention may be useful for the development of compounds with a  
 CC cytosolic activity acting as a stimulator of apoptosis. The method is  
 CC useful for reinforcing activity of an antibody which may be useful for  
 CC treating cancer. The method enables an increase in the agonistic activity  
 CC of the antibody, which is highly stable. The present sequence is that of  
 CC a region of a mouse protein which was used in the exemplification of the  
 CC invention.

XX Anti-Mpl antibodies including antihuman Mpl antibody and variants like  
 PT genetically-engineered antihuman Mpl diabody, applicable in drug  
 PT compositions for use in chemotherapy of thrombocytopenia and other  
 PT diseases associated with Mpl mutation.

XX Claim 22; SEQ ID NO 137; 106pp; Japanese.

XX The invention describes an antibody is a single-chain polypeptide with  
 CC TPO (thrombopoietin) receptor (Mpl) -binding activity that contains the 2  
 CC heavy-chain variable regions and 2 light-chain variable regions. Also  
 CC described are: a chimeric antibody for binding with Mpl; an antibody for  
 CC binding with soluble Mpl; antibodies for binding with human Mpl and  
 CC monkey Mpl; antibodies with agonistic activity against human Mpl and  
 CC monkey Mpl; antibodies with binding activity for soluble Mpl; antibodies  
 CC with TPO agonistic activity; antibodies containing a heavy-chain variable  
 CC region with CDR (complementary-determinant regions 1, 2 and 3);  
 CC antibodies containing a light-chain variable region with CDR 1, 2 and 3;  
 CC antibodies containing heavy and light-chain variable regions with CDR 1,  
 CC 2 and 3 selected from the already-specified groups in 18 combinations;  
 CC antibodies containing a heavy-chain variable region with FRI, 2, 3 and 4;  
 CC antibodies containing a light-chain variable region with FRI, 2, 3 and 4;  
 CC epitope-recognizing antibodies that can recognize the antibodies with the  
 CC heavy and light-chain variable regions and amino acid sequences;  
 CC antibodies that can recognize the amino acid moiety in human Mpl from

CC positions 26-274; polynucleotides encoding these antibodies;  
 CC polynucleotides hybridizable with the polynucleotides that encode the  
 CC antibodies under stringent conditions and the antibodies encoded by which  
 CC have equivalent activity as such antibodies; vectors containing these  
 CC polynucleotides; host cells carrying such polynucleotides or vectors; and  
 CC drug compositions containing these antibodies. The antibodies are  
 CC applicable in drug compositions for use in chemotherapy of  
 CC thrombocytopenia and other diseases associated with Mpl mutation such as  
 CC congenital amegakaryocytic thrombocytopenia. These antibodies can include  
 CC antihuman Mpl antibody and variants like genetically-engineered antihuman  
 CC Mpl diabody and (humanized) antihuman Mpl sc(Fv)2. Such antibodies are  
 CC soluble to enhance binding ability. The diabody and sc(Fv)2 show high  
 CC agonistic activity against antihuman Mpl antibody, such activity of which  
 CC is comparable or superior to that of the natural ligand, human TPO. This  
 CC sequence represents an anti-TPO antibody light chain variable region.

T32301

hypothetical protein M151.1 - Caenorhabditis elegans

C;Species: Caenorhabditis elegans

C;Date: 29-Oct-1999 #sequence\_revision 29-Oct-1999 #text\_change 09-Jul-2004

C;Accession: T32301

R;Gattung, S.; Goela, D.

submitted to the EMBL Data Library, September 1997

A;Description: The sequence of C. elegans cosmid M151.

A;Reference number: Z21148

A;Accession: T32301

A;Status: preliminary; translated from GB/EMBL/DBJ

A;Molecule type: DNA

A;Residues: 1-494 <GAT>

A;Cross-references: UNIPROT:O17121; UNIPARC:UPI000017BAD5; EMBL:AF024502; PIDN:AAB70378.

A;Experimental source: strain Bristol N2; clone M151

C;Genetics:

A;Gene: CESP:M151.1

A;Map position: 2

A;Introns: 42/2; 57/3; 91/1; 161/1; 206/1; 263/1; 309/1; 327/1; 352/1; 366/1; 390/1; 410

RT "The Aspergillus nidulans flug gene is required for production of an
extracellular developmental signal and is related to prokaryotic
glutamine synthetase I.";
RL Genes Dev. 8:641-651(1994).
CC -!- FUNCTION: May function as a GSI-related enzyme in synthesizing a
small diffusible factor that acts as an extracellular signal
directing asexual sporulation and perhaps other aspects of colony
growth. May be involved in brIA activation (an early
transcriptional regulator for conidiation specific gene).
CC -!- SUBCELLULAR LOCATION: Cytoplasmic.
CC -!- SIMILARITY: Belongs to the glutamine synthetase family.

Pred. No. is the number of results predicted by chance to have a  
score greater than or equal to the score of the result being printed,  
and is derived by analysis of the total score distribution.

#### SUMMARIES

Result No.	Score	Query Match	Length	ID	Description
1	55	100.0	9	3	US-09-155-106-6
